INDEX COMPOSITION

The Index's category weights are updated annually each February using prior year consumer data. They are derived from multiple sources, such as transaction data, census data, and expenditure surveys and cross validated with third-party datasets to ensure an accurate and unbiased view of consumer spending. The 2026 weights are:

Food & non alcoholic beverages	21.5%
Housing	8.6%
Transportation	18.5%
Utilities	4.2%
Health	7.2%
Household durables & daily use items	7.9%
Alcohol & tobacco	3.4%
Clothing & footwear	7.7%
Communications	4.3%
Education	3.1%
Recreation & culture	11.0%
Others	2.8%

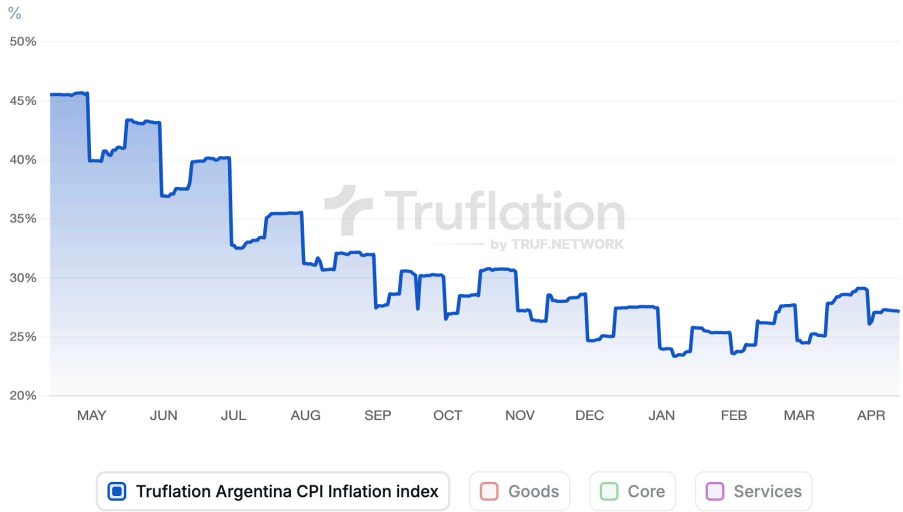
ABOUT TRUFLATION

Truflation is the real time truth layer for macro markets. We provide investors with actionable, high frequency trading signals built on transparent, independently verified economic data. Instead of waiting 30-60 days for government releases, our users get daily insights across 200+ indexes; inflation, housing, consumer categories, and more, all derived from real market prices, cross-checked across multiple sources, and published on chain for transparency. AI helps us process millions of data points so enterprises can access clean, audited, ready to use signals through our API.

EXECUTIVE SUMMARY

The Truflation Argentina CPI Inflation Index (TruCPI-AR) is a real time measure of Argentina inflation built from daily market price data collected from over 10 providers and more than 5 million data points. Unlike traditional inflation metrics that rely on delayed survey data, it uses actual transaction prices to provide a faster and more transparent view of price changes across major categories. By updating daily, the index offers timely insight into inflation trends, responds quickly to market shocks, and supports decision making for policymakers, businesses, investors, and researchers. It serves as a next generation inflation benchmark that more closely reflects real economic activity.

HISTORICAL YOY PERFORMANCE (1Y)



KEY FEATURES

Real Time, High Frequency Updates

Updated daily using continuously refreshed data, providing a near real time view of inflation dynamics.

Extensive Data Coverage

Built on 5+ million price points from 10+ data sources, offering broad, census level representation of the Argentine economy.

Dynamic Weighting Framework

Category weights are updated regularly based on current consumption patterns, ensuring the index reflects real world behavior.

Transparent & Auditable Methodology

Uses observable market prices with strict quality controls, time stamped data and reproducible calculations for full transparency.

BENEFITS

Early Detection of Inflation Trends

Acts as a leading indicator, helping users identify turning points ahead of official inflation releases.

More Accurate Reflection of Consumer Experience

Captures real time price movements across millions of items, delivering a more realistic measure of inflation in a high inflation environment.

Actionable Insights for Decision-Making

Supports faster, more informed decisions across investing, policy, pricing, and risk management through timely and granular data.
